

# How to Read Your Bill

### Bill Summary

The most important detail — your total amount due and the due date. You will also be able to see if this is your final bill, and if you are on budget billing or autopay in this section.

### Our Contact Information

Here's how you can reach us to ask questions, get information, and pay your bill.

### Account Details

This section includes your account number, the name on the account, and your board district. Find out which director represents your area on our website.

### Monthly Readings

Here you can find your kilowatt-hour use for the current billing month, previous month, and this month a year ago.

### Monthly Use Chart

This shows your monthly energy use over the past year, alongside high and low temperatures, which provides an at-a-glance view of seasonal trends and how energy use compares to the previous 12 months.

### Daily Readings

Get a glimpse of your average daily consumption and average daily cost as well as the average daily high and low temperature. This information can help you compare your use with the weather, and spot patterns that may help you save.

### Payment Stub

If you pay by mail or in person, please include the section below the dashed line to ensure your account is correctly credited. The barcode feature allows us to more efficiently apply payments.

### Payments and Charges

You'll find your previous balance and applied payment on the left, and a breakdown of current charges on the right. This includes a monthly fixed Customer Charge that covers the cost of maintaining equipment necessary to deliver power to each member and a variable Energy Charge based on the number of kilowatt-hours consumed during the billing period.

### Message Center

Look here for important information and time-sensitive reminders from your electric cooperative.

**Message Center**

- Customer Charge is a fixed cost every month that covers infrastructure and labor to maintain reliable and safe electric service for each account.
- Energy Charge is variable based on the number of kilowatt-hours consumed each month. Energy Charge is calculated by multiplying kilowatt-hour usage by the current kilowatt-hour charge.
